Project Design Phase-II Customer Journey Map

Document an existing experience

What have others suggested?

Narrow your focus to a specific scenario or process within an existing product or service. In the **Steps** row, document the step-by-step process someone typically experiences, then add detail to each of the other rows.

Natural disasters intensity analysis and classification using Al	Entice How does someone initially become aware of this process?	Enter What do people experience as they begin the process?	Engage In the core moments in the process, what happens?	Exit What do people typically experience as the process finishes?	Extend What happens after the experience is over?
Steps What does the person (or group) typically experience?	Users become aware of the Al model through the advertisements and social media social media	Video frames captured for the intensity analysis the disasters	Classifies the natural disaster and tells the intensity of disaster and disaster and disaster and the disast	Determination of the nature and to alert people if extent of disaster disaster is predicted	Establishing link Implementing With government and organizations and Threshold for Mitigation Actuating System
Interactions What interactions do they have at each step along the way? People: Who do they see or talk to? Places: Where are they? Things: What digital touchpoints or physical objects would they use?	Interaction with people who are familiar with product	Use of hardware on- screen interfaces to communicate lechnical experts	Interaction with scientists and disaster analysers Interaction with videocam for continus monitoring	Communicate their feedback to service providers Contact the helpline in case of disaster detection	Interaction with the government agencies for taking apportise for taking apportise functions spread awarenest
Goals & motivations At each step, what is a person's primary goal or motivation? ("Help me" or "Help me avoid")	Simple user friendly UI To gein knowledge in the field of natural disaster classification	To make full use of the functionality of the model	Improved response time Accurate prediction	Examining the numbers of fatalities, injuries	Ensuring better service to customers Improvisation base on feedback provided
Positive moments What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?	Motivated to save human and property Productive algorithms and calculations for disaster classification	Delightful user Exploring the possibility of a continuous stall-learning model using DL	Designing light weight Web Application of model	Periodic forecasting Operation across without interruption terrains and climates	Examining the Implementing financial damage and Threshold Actuating System
Negative moments What steps does a typical person find frustrating, confusing, angering, costly, or time-consuming?	Time consuming Complexity of analysis algorithms	Fear of losing data Costly hardware and software components	Collection of large set of data is time consuming Frustation due to long duration of training of model	Failure due to technical issues Anger due to some error in resuts	Examining the false triggering and correcting it
Areas of opportunity How might we make each step better? What ideas do we have?	Increased brand Advertising the loyalty model to public	Betterment of accuracy in and testing data prediction	Designing light weight Web Application of more number of data	Optimizing the AI Model with respect to real world without interruption	Maximizing the uptime of the Web triggering as Correcting i
